CREATIVE RESINS

NEW PRODUCT LAUNCH

The new wood effects have now been launched. This is a polyurethane acrylic waterborne coating system which gives Upvc, glass, plastic and metal a woodgrain finish. The wood effects are a spray on system with ultra low VOC but high heat reflective properties ideal for extreme temperature countries.

The Cancote kit is proving very popular world wide. This is mirror spray in an aerosol with an aerosol backing. This can be used on any plain surface to create an 80% mirror reflective surface in a matter of minutes. This handy kit is ideal for carrying out onsite repairs for scratched mirrors.

STIPPLE FINISH

We introduced the Stipple finish at Gulf Glass last year and it is an amazing finish on a resin panel. Added into the colouring system it also stops dust from showing if you have no choice but to

colour in a dusty area. This whole panel was created using the stipple and it gives an textured glass finish.

ERADICATOR SPONGES

The eradicator sponges are ideal for removing chalk writing from glass in seconds. Used dry they can also rid sandblasted glass of oil marks.

On Upvc any marks such as bird lime, tree sap staining and general pollution stains can be removed using a damp eradicator sponge leaving the Upvc looking like new.
